

MULTIMEDIA AND ANIMATION

PRACTICAL-2

Aim:- Use HTML multimedia supports to play different video formats in a browser

Steps:-

1. Open notepad++ and create HTML file & save with extension "video.html"
2. Use <h1> tag for heading of the webpage.
3. Make div class <div class="box"></div> to insert video in it.
4. Then use video tag like this:-

```
<video width="320" height="240" controls>
<source src="mp4.mp4" type="video"
</video>
```

5. Use internal css for styling webpage like background color, width, box-shadow etc
6. Now save the coding and open it as in chrome browser to view the webpage.
7. Below is the snapshot of my webpage

Code:-

```
<!DOCTYPE html>

<html>

<head>

<style>

.box{

margin:20px 550px 0px 550px;

background-color:white;

width:350px;

box-shadow: 3px 5px #f0f0f0;

}

</style>
```

```
</head>

<body>

<div class="container" style="height:100px; background-color:black;">

<h1 style="text-align:center; color:white; ">Use different multimedia support to play different
audio formats in a browser.</h1>

</div>

<div class="box">

<video width="320" height="240" controls>

<source src="mp4.mp4" type="video/mp4">

</video>

<p><b>This is mp4 video format.</b></p>

</div>

<div class="box">

<video width="320" height="240" controls>

<source src="ogg.ogg" type="video/ogg">

</video>

<p><b>This is ogg video format.</b></p>

</div>

</body>

</html>
```

Output:-

Use different multimedia support to play different audio formats in a browser.

This is mp4 video format.

This is ogg video format.
